The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Imamura et al.

Figures 1,2,4,6,13,14 show structure as claimed, including a display assembly having a support arm 16 which positions the display screen to face away from the seatback when in use. As seen in figure 2, the support arm is connected to a rear surface of the seat back, opposite to an angled front seating surface.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2,3,5-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Imamura et al in view of Shichijo et al and Buono.

To have modified the mounting arm of Imamura et al so as to pivot about a flexible joint at the display end as well as the back end, to provide greater movement and versatility thereof, would have been an obvious modification to one with ordinary skill in the art, in view of the disclosure of Shichijo et al. (figs. 2,5).

Likewise, the patent to Shichijo et al (fig. 1) teaches the use of a housing on the seatback for storing the display therein, and such a provision on the back of Imamura et al, would have been obvious to one with skill in the art, thereby moving the display to an out-of-the-way position. Regarding claim 2, to have utilized a telescoping arm for supporting the display would have been well within the level of skill in the art, in view of the suggestion of Buono (fig. 2) thereby allowing a greater range of movement.

Regarding claims 8-17, the size and type of display screen utilized is considered a matter of design choice.

Applicant's arguments filed April 12, 2005 have been fully considered but they are not persuasive.

As set forth in the above rejection, figure 2 of Imamura et al shows the surface that supports the display arm as being opposite to an angled front seating surface, therefore, the surface may be construed as being a rear surface, insofar as set forth in the claim.

This is a continuation of applicant's earlier application. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
